

SP-WP500 - How to reset the connect core to the correct position

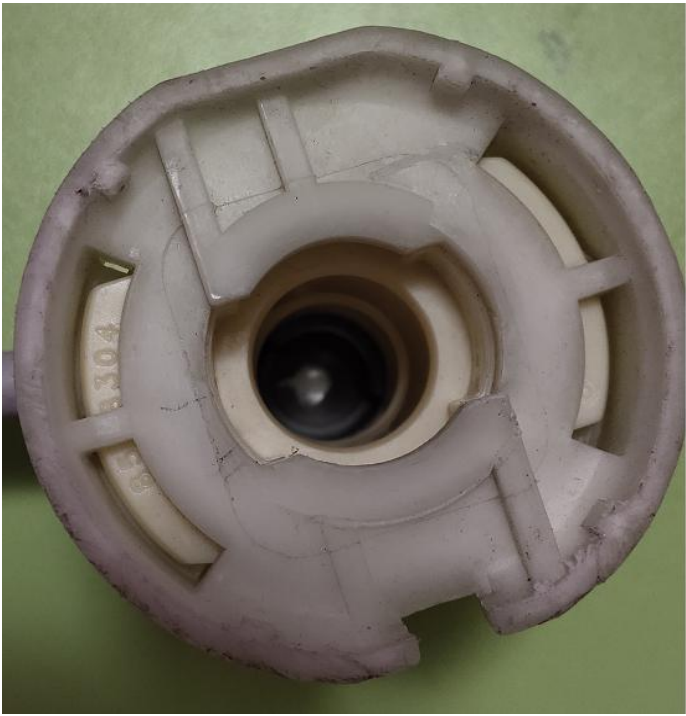

Image A

The connector core in the wrong position.

Image B

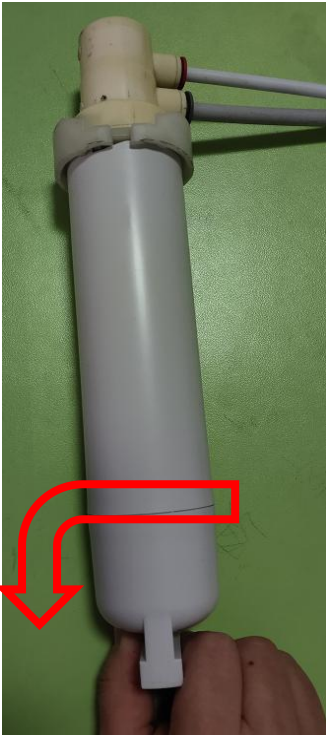

The connector core in the correct position.

If the locking mechanism of the old filter is as shown, follow the steps below:

Locking mechanism of the old filter

Re-insert the old filter. Rotate it a 1/4 turn counterclockwise. Then pull the filter out.

Do not pull the old filter out while rotating.
